## Constant-Measuring-Force Mechanism

1 Measuring force is generated by the action of trapping a workpiece between the spindle face and the anvil. 2 The constant-force unit applies the specified measuring force.
3 When the preset measuring force is reached, the count on the LCD is automatically held and the hold symbol appears. (To cancel the hold, reverse the thimble more than $1 / 10$ revolution and press the hold button.)

Adjustable Measuring Force
To preset the measuring force, adjust the measuring force setting scale on the thimble with the screwdriver supplied.
